

Introducing the NEW! Alpine body from OSW Equipment. Built with OSW's premier craftsmanship, this body is a natural fit for fleets. The Alpine is ready to take on the toughest jobs and is constructed of abrasion-resistant steel. The body features a double-wall design, which helps keep your dump truck looking great. The inner wall absorbs dents and dings, keeping the outer wall clean. Release loads more efficiently with the Alpine's built-in rear taper design. This extra length is just the right angle for spreading material and eliminates the need for an add-on spill apron with extra welds that can cause material hang-up. OSW builds a premium body featuring full-length welds, flame-cut steel latch fingers, and flame-cut steel tailgate hinges crafted for longevity and durability. The Alpine body's upgraded construction helps your investment stay up and running longer.

*BODY SHOWN WITH OPTIONAL FEATURES

1 FULL-LENGTH WELDS

Premium construction for a long-lasting quality product.

2 BUILT-IN TAPERED REAR

Alpine has ideal set-back length to dump all materials where you want them without hang-up.

3 DOUBLE WALL DESIGN

Additional strength while maintaining looks, the inner wall protects the outer from showing dents and dings.

Optional High-lift tailgate Flame-cut tailgate fingers
